Get Disease Risk

Score:

Good news! The patient is not at risk for cardiovascular disease.

ML Results:

- Precision = 0.7264619164619164
- Recall = 0.725743751818539
- Accuracy = 0.726

Results and discussions

- Cloud-based opportunities
- utilize machine learning's potential
- forecast the risk based on patient's medical history
- update and train further on new data

Conclusions and recommendations

- cost-effectiveness
- efficient solutions
- flexibility
- human error ↓
